

TO: Jennifer Carroll, Mayor of Erie; Erie Board of Trustees

491 people have signed a petition on Action Network telling you to Delay the Vote on the Operator Agreement and Allow Residents Involvement!

Here is the petition they signed:

Dear Mayor Carroll and Erie Board of Trustees,

Residents of Erie, along with Impacted Broomfield Residents, are writing to object to the renegotiation of the Operator Agreement with Crestone Peak Resources. As residents who are seriously concerned about the health and safety impacts of Crestone's proposed projects next to residential neighborhoods, we are asking that the applications related to this proposed development not move forward at this time for the following reasons:

Erie Residents Question Whether the Quasi-Judicial Designation was Correctly Applied by the City and Believe Residents Were Denied Their Rights to Participate in Their Government

- From the Erie Quasi-Judicial FAQ's, "In a quasi-judicial proceeding, the Town Board is not setting new policy, but applying the standards in an existing ordinance, statute or regulation to facts presented at a hearing, similar as to how a judge would act." We question if negotiating a new Operator Agreement is considered setting a new policy, which is not meant to happen in a Quasi-Judicial matter, but rather as a Legislative Act.
- If the Quasi-Judicial designation was not applied correctly, the Board of Trustees may have unfairly excluded the Residents from what should have been a Legislative Process.

Erie Residents Were Not Given Enough Time to Review All of the Documents:

- Residents were given less than a one week notice which does not allow enough time for a thorough review and ability to comment on an Operator Agreement.
- The BMPs were not posted until 9pm Thursday, and as of Sunday night the pipeline maps were still not publicly available on the Town of Erie website. Erie Residents deserve more time to review these important documents.
- The location of some of the well sites near Highway 7 (known for major traffic issues), gas stations, and also near a General Aviation airport pose additional threats to the safety of both Erie and Broomfield communities and needs to be evaluated with greater scrutiny and there needs to be meaningful public engagement.
- Erie and Broomfield Residents deserve a true public forum, with enough notice for adequate participation by all Residents who wish to attend.

In the limited time available to review the Operator Agreement, Erie Residents have identified several shortcomings that we believe need to be addressed prior to any votes on this matter:

- The existing Operator Agreement provided for 1000 ft setbacks for residents. This standard was waived in the new agreement for certain sites, which decreases protections for public health and safety for Erie Residents.

- The Best Management Practices (BMPs) do not adequately address the increased concerns for large-scale oil and gas operations in close proximity to densely populated communities. The Operator Agreement does not address heavy truck usage during peak hours, restricting the levels of air emissions, preparing and maintaining an emergency preparedness plan including evacuation routes and a system of notification; air quality monitoring and reporting; and the completion of a Risk Mitigation plan including a full risk analysis for the cumulative impact of all wells
- There are shallow mines in the area of the proposed project that were a part of a State funded 2013 subsidence restoration project. The "experts" cited in the Amended Operator plan do not include the Colorado Geological Survey who are the foremost experts on the subsiding shallow mines in our town.
- Erie Residents would like the opportunity to address other concerns in the Operator Agreement like the town waiving its rights to call a hearing for applications 2 and 2A at the COGCC if staff feels the BMP's have been met as this effectively precludes the residents' ability to challenge a project at the COGCC level.
- There is no public plat, pipeline map or timeline available for public review that reflects the total new number of wells.
- This megasite is an area where emissions, under certain weather conditions, will be trapped in low-lying areas under temperature inversions, exacerbating the polluting effects of Oil and Gas processes.
- The Highway 7 Coalition has a long-term vision to make Highway 7 safer, reduce traffic congestion and introduce more public transportation options as communities served by that road continue to grow. Since this Highway is already over capacity, this Coalition must study and provide input on the resultant impacts of the significant increase in volume of large truck traffic related to this project.
- This megasite is exempted from many of the BMPs that do exist, even though the project has not yet been approved and is well within the timeframe to enact application changes.
- The location of at least one of the sites is incompatible land use. In fact the current Erie Zoning Map shows the land is approved for Low Density Residential which is consistent with the adjacent land use.
- Erie is tying the Operator Agreement to a settlement of a court case about odor. We believe these two issues should be evaluated independently of one another.

Broomfield Residents Are Directly Impacted and Are Being Denied the Opportunity to Participate in the Public Process

- In a letter sent to Governor Hickenlooper on July 30 of this year, several elected officials from Broomfield and Erie stated that Governments need to "stand united against these border wars" and "not be swayed by this divisive approach", also stating that these "[m]ulti-well mega pads do not belong near our homes, schools, and water sources".
- By excluding Broomfield Residents from engaging in this process, Erie is creating a new front in the "border wars." Broomfield Residents in the impacted area support Erie businesses and use Erie Day Care Centers. We believe they should not be excluded from this process.
- Many letters from Broomfield residents have been sent regarding this matter, along with a request from Broomfield Leadership to become a party of interest in this megapad project and no response has been received.
- The City of Broomfield sent a letter to the Town of Erie Community Development Department dated July 17, 2018 regarding proposed developments. To date, the City of Broomfield has not received a response to these questions.

- Broomfield and Erie Residents want their Local Governments to work together to ensure that the State upholds and enforces the Colorado Oil and Gas Conservation Act, which states in § 34-60-102(1)(a) that it is declared to be in the public interest when oil and gas development is done "...in a manner consistent with protection of public health, safety, and welfare, including protection of the environment and wildlife resources."

The State Election Occurring in One Week has Major Implications Regarding the Future Laws that Pertain to Oil and Gas Development. Broomfield and Erie Residents Ask That Our Right to Vote be Respected and that the Board Pause From Issuing any New Permits Until After this Important Election.

Accordingly, we respectfully request that the vote on the renegotiation of the Crestone Operator Agreement be delayed until all interested parties have had the opportunity and adequate time to review all relevant information and to subsequently offer input. It should not be discerned that we are only concerned about one particular site, but rather we are coming together as a community to ask that the Board look at all future development from the scope of protecting the health, safety, and welfare of our residents.

Sincerely,

Concerned Erie and Broomfield Residents

The residents of Erie and specifically Vista Ridge have been inundated with oil wells and have suffered immensely because of these wells being too close to residences. It is the responsibility of elected officials to protect the health and safety of all Erie residents and to put their health and safety before any perceived financial gain or loss to Erie.

Let's keep our neighborhoods safe and healthy. With another proven danger happening in Weld county this week concerning a tank setting on fire, there is no reason to place families close to wells. Technology is showing us quickly that oil can be reached while distancing equipment and it's related hazards from communities. Thanks.

Our iphone in reporting the weather now reports that the air quality in Broomfield is unacceptable and dangerous for those sensitive to air pollution. We are in that group.

We live close to this proposed site and the air quality will only worsen. Please no more agreements until all safety and health issues have been agreed upon by Crestone. Also let's wait until after the election regarding 112.

??Air pollution is the 'new tobacco', warns WHO head. ??Globally, with smoking on the decline, air pollution now causes more deaths annually than tobacco.

The figure of 7 million early deaths is certain to be an underestimate, as it only includes particle pollution and the five most firmly linked causes of death. Early estimates using improved models indicate a total figure of 9 million from particle pollution.

The cost of the lost lives and ill health caused is also a colossal economic burden: \$5tn a year, according to a World Bank report. Tackling air pollution by closing polluting power plants and shifting to cleaner transport, such as cycling or electric cars, has a double benefit as it also tackles climate change. Neira said that, given the overwhelming evidence of harm from air pollution, any politician who failed to tackle air pollution would be judged harshly by future generations – and the law.

“Politicians cannot say in 10 years from now, when citizens will start to take them to court for the harm they have suffered, that they didn’t know,” she said. “We all know pollution is causing major damage and we all know it is something we can avoid. Now we need to react collectively and in a very dramatic and urgent way.”

I hope you will put the health and safety of the citizens before the profits of a big oil and gas co! The health issues alone are REAL and if you read all the horror stories on the Nextdoor app where families have had their health seriously effected by nearby oil and gas operations, you will see this is of grave concern to Erie and Broomfield residents. If THIRTY wells and the related activity are THIS close to THIS many homes I am very concerned that 5 years or so from now you will see numerous people with health issues as a result. We dont want to shut down drilling/fracking but simply ask that u make them move to a safer distance from homes! PLEASE!

Health and human safety is more important than the financial gain of business. If oil and gas wants to extract resources so close to residential areas they need to design safer, less disruptive ways of extracting resources. Better yet, renewable resources should be what we're utilizing.

The facts in this project seem to sorely lack appropriate information to the public to assure safety to the community and property. Why is it we allow oil and gas luxuries that other large industrial or commercial projects don't enjoy in the planning, development, execution phases of business. I feel this project is fraudulent at worst and deceitful at best. To mislead and misrepresent the truth seems to be the modus operandi of the oil and gas companies and COGCC. It's shameful and disgusting.

We run and ride regularly in this area, as do hundreds maybe thousands of other area residents. Given the industry's track record (2-3 spills leaks per day in the last two years, several major explosions that have killed or severely injured workers and nearby families) I object to Crestone's proposed development in such close proximity to heavy residential land use. We are 100% opposed to any more fracking approvals in the Anthem area.
